To run the car wifi control program

As I am using Arduino driod app

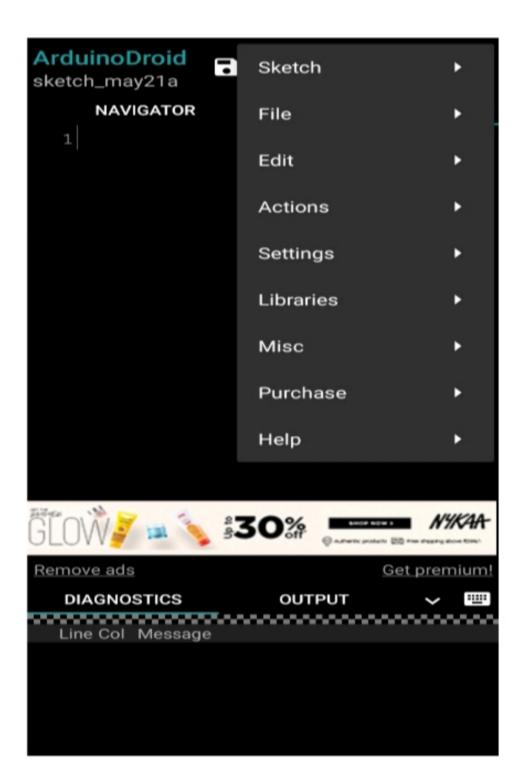

The ESP8266 board type is needed we have to change your it from Arduino to ESP8266.

Click on 3dots that are on the corner

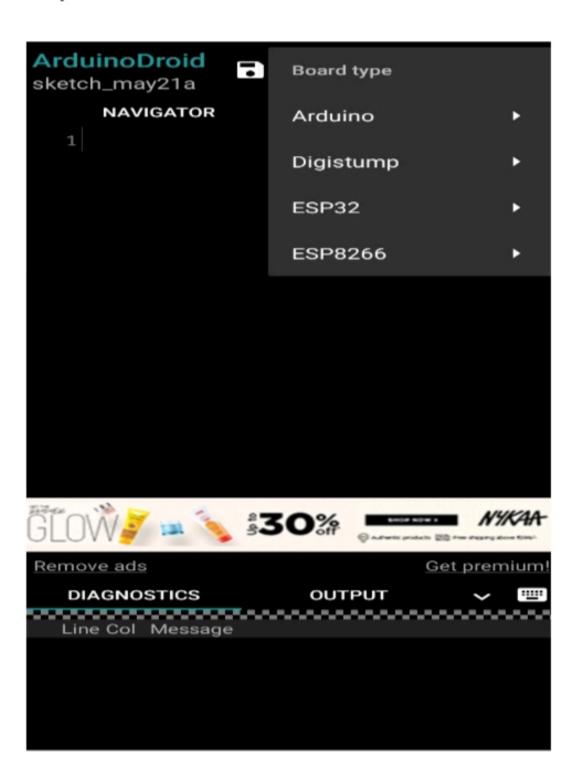

Select the settings options

There 2 options will be present select board type

Next in 3options select 4th one

Now select the 2nd option Adafruit feather

HUZZAH ESP8266

Ardu sketci	ESP8266	
	4D Systems gen4 IoD Range	
1	Adafruit Feather HUZZAH ESP8266	
	Amperka WiFi Slot	
	Arduino	
	DOIT ESP-Mx DevKit (ESP8285)	
	Digistump Oak	
	ESPDuino (ESP-13 Module)	
	ESPectro Core	
	ESPino (ESP-12 Module)	
ĞLO\	ESPresso Lite 1.0	
Remov	ESPresso Lite 2.0	
Line	Generic ESP8266 Module	
	Generic ESP8285 Module	
	ITEAD Sonoff	

Hence we got our required board to runs programs in Esp8266
